Diagram illustrating the assembly of a gear onto a shaft:

- The top part shows a gear, a pin, a bush, a sleeve, and a shaft. A dimension line indicates a length of 60 mm for the shaft section.
- The bottom left part shows the gear being slid onto the shaft.
- The bottom right part shows the gear fully seated on the shaft.

The image contains two diagrams of a mechanical system. The left diagram is a simplified 2D representation showing two arms pivoted at a central point. Each arm has a weight hanging from it and is connected to a gear. The gears are meshed with each other. The right diagram is a more detailed 3D-like representation of the same mechanism, constructed from wooden blocks. It shows a motor at the base driving a large gear, which is meshed with a smaller gear on the right. This smaller gear is connected to a lever arm that has a weight hanging from it. The lever arm is pivoted on a wooden block. The motor is connected to a power source via a cable.
